2 My first section

2.1 Literature citations

The following examples illustrate the required style in the main text: Einstein (1926) showed that $v_h = 1926 \text{ km s}^{-1}$ was not a prime number, as also found previously (Laurel 1924). On the other hand, Einstein & Strauss (1945) followed Kafka et al. (1924) and found a better approximation to the distance, yielding $d_o = 22 \text{ kpc}$ (see also Bohr et al. 1926; Curie & Curie 1991; de Gaulle 1996, and references therein). For frequently cited papers an abbreviated form of citation is recommended, e.g. Paper I, Paper II.

The format for references is the one adopted by A&A. To set the reference list in the proper format, we encourage you to use `BIBTEX` and the `natbib` package instead of the standard `\thebibliography` environment.

2.2 Footnotes

These should be kept to a minimum and used as usual*.

2.3 Hyperlinks

Hyperlinks can be introduced as follows: <http://www.sf2a.eu/>.

2.4 Figures

Please use files in the PDF format, as shown in Fig. 1. Figures in eps format can be converted to pdf with the command `epstopdf` (used as “`epstopdf file.eps`”). Two figures can be joined together as shown in Fig. 2. In this case, as illustrated in Fig. 2, the caption must follow this format (e.g. boldface fonts for the Left and Right items): **Left:** text of the caption for the left panel. **Right:** text of the caption for the figure on the right hand side.
